API, Libraries and Framework:

- 1) ReactJS – our front end library that we are going to use
  - a. Redux – allows you to manage the state
  - b. Socketio – to connect to the backend that we are using, python
  - c. Axios- fetch http request or send http to backend
- 2) NodeJS – we need NodeJS to use ReactJS
- 3) Python Flask – we are going to python for our backend
- 4) Socketio – we need socketio to allow multiple users playing the game
- 5) Werkzeug security – we will use this to store password with salted hash so it is secure
- 6) We will be using bootstrap for styling
